Consumer Price Index

A release from the Province of British Columbia's central statistical agency

REFERENCE DATE: SEPTEMBER 2015

CONSUMER PRICE INDEX (2002=100)

HIGHLIGHTS

British Columbia's consumer price index (CPI) climbed 1.3% (*unadjusted*) in September, compared to the same month of the previous year. September's rise marked the third consecutive year over year increase in the rate of inflation.

According to Statistics Canada, the overall annual inflation rate of 1.3% increases to 2.1% when energy is excluded from the index, and declines to 0.6% when food is excluded from the index.

The overall cost of food rose by 4.5% since September of last year, with the cost of both groceries purchased from stores (+5.6%) and meals purchased from restaurants (+2.2%) increasing. The rise in grocery prices was mainly due to significant increases in the cost of fresh vegetables (+14.7%), fresh fruit (+9.2%), and meat (+8.8%).

The cost of shelter (-0.4%) declined slightly in September, with costs for renters increasing (+0.9%) while the cost of owned accommodations edged down (-0.5%). Within the shelter category, the cost of electricity increased (+5.9%) since September 2014, while the price of piped gas (-18.1%) and fuel oil and other fuel (-18.8%) decreased.

The transportation index (-2.0%) has declined since September 2014. The cost of private transportation decreased (-2.4%), due mainly to a large decline in the price of gasoline (-15.0%). The cost of public transportation increased (+0.4%) over the same time period.

The cost of both clothing (+4.3%) and footwear (+10.9%) increased in September, with children's clothing showing the largest change (+12.4%).

Compared to a year ago, consumers paid more for recreation, education & reading (+3.5%), alcoholic beverages and tobacco products (+2.3%), household operations and furnishings (+1.6%), and health & personal care (+1.4%).

Consumer prices rose in both Vancouver (+1.2%) and Victoria (+1.4%), close to the rate of inflation for the province of British Columbia as a whole.

Canada's CPI rose 1.0% (*unadjusted*) in September. Provincial inflation rates ranged from a high of 1.4% in Saskatchewan, to a low of -0.8% in Prince Edward Island.

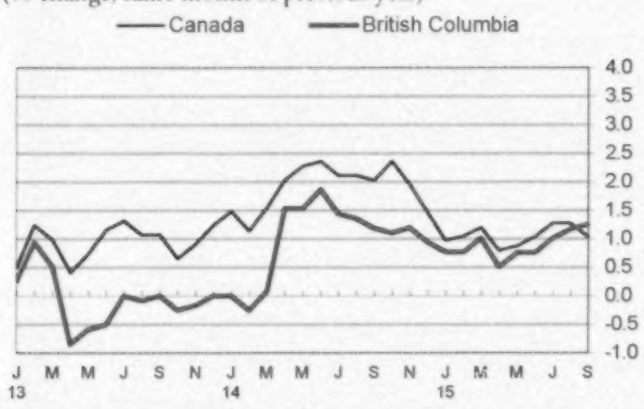
Note: Statistics Canada will release the October Consumer Price Index on November 20, 2015.

2002=100	All-Items Index	% Change from	
	September 2015	August 2015	September 2014
Canada	127.1	-0.2	1.0
BC	121.0	0.0	1.3
Vancouver	122.7	0.0	1.2
Victoria	119.5	0.1	1.4
Core Canada[1]	126.6	0.2	2.1
BC (excluding energy)	118.8	0.4	2.1

[1] The Core CPI for Canada: Defined by the Bank of Canada as the All-items index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

BC AND CANADA INFLATION TREND

(% change, same month of previous year)



2002=100	Latest 12-month Average Index (ending in September 2015)	Latest 12-month Average % Change	2014 Annual Average % Change
Canada	126.2	1.3	2.0
BC	119.7	0.9	1.0
Vancouver	121.4	1.0	1.1
Victoria	118.2	1.0	0.9

TERMS AND DEFINITIONS

BASE EFFECT

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

TWELVE-MONTH PERCENT CHANGES

Also referred to as "year-over-year", twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

ANNUAL AVERAGE INDEX

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

LATEST TWELVE-MONTH AVERAGE INDEX

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

HARMONIZED SALES TAX

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.

On April 1, 2013, the Harmonized Sales Tax came into effect in Prince Edward Island, while British Columbia returned to the Provincial Sales Tax and the Goods and Services Tax.
